When (and if) finished, it will prove a complete guide to Open Source Clipper programming. However, this set of notes is still very incomplete. The current plan consists of two introductory chapters, then the first part of the tutorial will cover the basic of the language, up to the procedural programming facilities and the native database-DBF file support.

Clipper Programming Language From Wikipedia, the free encyclopedia.(*) Clipper(or CA-Clipper)is a compiler 16 bits of language xBase environment for DOS. It was created in 1984 with the purpose of being a compiler for Ashton-Tate dBase, a database manager very popular in his time.

Clipper Programming Language
All commands in CA-Clipper are defined using the #command directive and supplied in the standard header file, std.ch, For more information and a general discussion of commands, refer to the "Basic Concepts" chapter in the Programming and Utilities Guide. Match Pattern.

Clipper Reference Guide - Clipper 5.3
The following topics are covered: Structure of a CA-Clipper Program Functions and Procedures Control Structures Variables Expressions Data Types Operators The Macro Operator Programming and Utilities Guide 2-1 The Structure of CA-Clipper Program Arrays Code Blocks Objects and Messages Database, Input /Output, Keyboard, and Low-level File Systems The Structure of CA-Clipper Program A CA-Clipper program is a collection of statements that adhere to the rules defined by the CA-Clipper language.

CA-Clipper for DOS Version 5.3 Programming and Utilities Guide
Clipper is an xBase compiler that implements a variant of the xBase computer programming language. It is used to create or extend software programs that originally operated primarily under MS-DOS. Although it is a powerful general-purpose programming language, it was primarily used to create database/business programs. One major dBase feature not implemented in Clipper is the dot-prompt interactive command set, which was an important part of the original dBase implementation. Clipper, from Nantu

Clipper programming guide (1991 edition) | Open Library
Object Oriented Programming. Clipper had very limited support for OOP (Object Oriented Programming, from now on we'll call it by its nickname). His successor CA-Visual Objects was much more advanced in this respect. However Visual Objects never had a great success, and third-party producers provided OOP libraries for Clipper, among which the most famous were Class (y), TopClass, FiveWin and Clip4Win.

Clipper Tutorial: a Guide to Open Source Clipper(s)Object ...
This operator returns the two values accepted by the IF: true or false, whose names in Clipper/xBase are respectively .T. and .F.. If the result is .T. the program executes the first instruction or block of instructions it encounters, if the result is .F. it executes the first instruction or block of instructions after the ELSE keyword.
