In general, the dynamic models of GMA are usually classified into three types:

namely, the linear magnetostriction model, the single-DOF vibration model and the continuum vibration model. The first one denotes an analysis method where the output of GMA is calculated by  $\lambda \cdot l_0$ , here  $\lambda$  denotes the magnetostriction of GMM and  $l_0$  denotes the length of the material in its un-magnetized state [ 20 ].
