### Webrtc Blueprints Packt

WebRTC can't create direct connections between peers without the help of a signaling server. The signaling server is not something standardized that your application can use. Actually, any communication mechanism that allows us to exchange Session Description Protocol (SDP) data between peers can be used for signalization.SDP is described in the next section.

The way WebRTC handles packet transport is very similar to how the browser handles other transport layers, such as AJAX or WebSockets. The browser gives an easy-to-access API with events that tell you when there are issues with the connection. In reality, the code to handle a simple WebRTC call could be thousands or tens of thousands of lines long.
